

## Melamine pads

Melamine pads are excellent for effective and intensive deep floor cleansing without damaging the surface. Main Features: dirt-absorbing effect – economically alternative – less chemicals – floor structure and slip resistance are retained. Suitable for ceramic and stoneware, cast stone, natural stone, terracotta, coated concrete, textured safety tiles, PVC, linoleum, synthetic resin and similar materials.

## Melamine pads

### Product care

To increase the longevity of this product, avoid cleaning uneven surfaces. The pressure on the pad should be checked regularly and it should be ensured that pad and floor are permanently wet / moist during cleaning.

### Sustainability

When using the melamine pads, the use of cleaning chemicals is not necessary. The laminated non-woven carrier material is made of 100% recycled polyester fibers. The melamin pad body consists of melamin foam.

### Use

This product is used for the cleaning and restoration of different floor surfaces, such as Vinyl, terrazzo, ceramic and porcelain tiles, epoxy resin or concrete floors. Ideal for use with machine speeds of up to 350 rpm.

### Directions for use

The outstanding properties of the melamine pad allow unusually high friction when used for floor cleaning. It is important to always add water or a neutral cleaning solution / cold cleaner / degreaser to the pad and floor to reduce friction in the start-up phase. Place the fleece side of the pad with the melamine side facing down (pointing to the floor) onto the pad holder of the floor cleaning machine. The pressure on the pad should be checked regularly to prevent premature wear. Avoid uneven surfaces that wear the pad quickly.

**Note:** Due to the intrinsic properties of the material and variable conditions of use, there may be slight variations in the specifications and results. Please contact JPU with any questions or concerns.
